## Mastercraft x24 surf settings

If you are looking for a Mastercraft surf boat that creates a beautiful surf wave with good th push and length, there are quite a few options depending on your budget. Mastercraft X20, X23, X24 surf boats organized the top spots in the classic Mastercraft 20-foot X20 and X23 long wakesurf boat category. X24 SurfStar Mastercraft X23 and XStar are his latest successor. Controlled by the Gen 2 Surfing System and FastFill ballast system, it features a new surf-specific body design that creates one of the best waves with up to 4300lbs of ballast and has the ability to instantly transfer ballast from side to side. Mastercraft X30 surf boatBoats with microwave shapers and built-in/hidden automatic ballast systems will be very pricier. On the other hand, if you are willing to manually load weight into the compartments to shape your DIY surf wave, you can significantly reduce your budget of about \$40,000 (see this post), for example. The old Mastercraft X30 (now replaced by XT23), for example, the 2015 model can offer very clean, easily adjusted wave by adding 1100lb of paphos in cabinets. The X30 is a very excellent boat with much shorter X20 rooms. The wave of stock on the X30 is good but can largely be improved with some updated bags (e.g. Wake Makers 910's) and several ps of lead, resulting in one of the best waves among Mastercraft boats. Mastercraft X2 and XT20/21 surf boatsThe 2013 or the new Mastercraft X2 family wakesurfing is fun and a versatile boat with a good wave for a lot of storage space. The XT20 and XT21 are much deeper and heavier than the X2. Mastercraft NXT surf boatsA 2015-2016 NXT22 can also offer a good wave for about \$60,000 with a slightly raised bag of back and lead. These boats did not come into stock with a ballast and surf system, so you need to fill the outer bag to wake up a good surf by hand. Although they are slightly narrower and slightly less luxurious than the X series, the NXT is affordable and great for wakesurfing comfortably during a family day at the lake. Mastercraft XStar surf boatXStar can produce a good surf wave with right ballast for example full stock ballast + 1100 lbs in rear harbour cabinet + 750 lbs spotter seat + and bow in front of 180 lbs. It is used to fill stock pumps and empty bags. The addition of 5 to 7 people in the boat creates a beautiful wave (tall but close to the boat) that can surf for miles. Mastercraft X25 – Among the old Mastercraft boats wakesurf for X55, X55 produces one that awakens the largest surf. The X45 is easy to install and also creates a fairly large wave. Next up is the X25, which is also easy to install. The X35 creates a nice wake-up but requires more time to set up - the X45 is much easier to install and there is a better wave on the left side. However, the X45 requires much more ballast weight than 35 and 25 to affect wake-up, like second boats, although short, there are deeper V-hulls that respond further to ballast weight. An example set for X45 £400 pies in the back closet and on the bow floor, the factory is full of ballast, and a £1,100 bag in the back seats. The resulting wake-up lets you surf up to 20 feet back on the boat. Mastercraft XT23 surfboat XT23 on XT23, replacing the X30, will increase the multi-surf wave instead of the stock Gen2 sack for the large Wake Makers 820/910. If you keep the stock ballast, the Surf Mellow factory setting makes the wave longer with more surf rooms and seems to work better than dik as the more driving line down the boat further away. Whichever Mastercraft surf boat you choose, but keep in mind that in a shallow lake the wave will never be so big compared to the deeper, 15'+ lake. Mastercraft surfing systemNewer Mastercraft is equipped with Gen 2 Surf System, which allows you to control ballast, speed and forming device angles from a single control to create customized surf waves. You can easily adjust the wave for each rider level, preferences, board type and boat side (left or right). The generated wave is clean and can have the desired th push and length, and the settings can then be saved to replicate the same wave. Mastercraft Gen 2 system competes with Malibu Surf Gate system. Both systems produce long waves that allow surfers to surf 18 feet behind thetekne. Mastercraft Gen 2 wave, however, tends to push more than Surf Gate for a specific wave size. SOLD VERY SOON SOLD Full Version : X24 optimal installation djas06-20-2020, 12:13 PMBiz I bought an X24 and pick it up next week. Thank you @maniacmike and chimed in for useful information about it! @maniacmike he needed £300 of lead to clean up the surf wave. Where? Related... I would be grateful if X24 owners/users could share optimal setup lessons that have learned from what's best for big surfing and wakeboard waves. Tapatak moosehead06-20-2020, 02:28 PMAs sent to my iPhone using partial comp, we thought the X22 wave stock was spectacular. But adding £100 of lead under each back bag, the observer made under 50, and 100 nose/anchor cupboards unreal. Otherwise, we'll have light crew. No ballast beginner wakeboard setting at 18.5mph is also clean, nice ramps with lead above. We're going to work on the middle and above today. djas06-20-2020, 04:11 PMAs partial comp, we thought the X22 wave stock was spectacular. [emoji106] Tapatak moosehead06-20-2020, 10:34 PMSurf right upright 11.2 MPH and sent to my iPhone using fully tuned all ballast tanks including switchback. Tapatak Pro was sent to my iPad using djas06-21-2020, 02:20 PMSurf right upright 11.2 MPH and fully tuned all ballast tanks including switchback. Tapatak Pro [emoji847][emoji847][emoji847] sent to my iPad using Tapatak djas06-21-2020, 02:30 PMPotansiyel stupid question sent to my iPhone ... How does the switchback tank work? Water slosh to your side regardless of what's lower just for surfing? Do you use it when you wakeboard? Tapatak TolCarMan06-21-2020, 04:35 PM Used to send my iPhone we get a killer wave with all ballast full and tabs in factory settings. Cruise 10.7 upright and 11.2 for mellow. djas06-21-2020, 04:57We get a killer wave with all ballast full and tabs in factory settings. Cruise 10.7 upright and 11.2 for mellow. Helpful thank you! [emoji120] Tapatak djas06-21-2020, 05:00 PMPotansiyel sent my iPhone using stupid question ... How does the switchback tank work? Water slosh to your side regardless of what's lower just for surfing? Do you use it when you wakeboard? I found the answer sent from my iPhone using Tapatak. Tapatak maniacs06-22-2020, 11:38 PM Get with a grain of salt sent to my iPhone using it. I like Xstar. My friend has an x24 and I have made a lot of journeys through them for demos. Fill the return tank and put 300 pounds of lead under the passenger-side coffin seat. This is the most basic weight setup - and the wave will be clean on both sides without moving anything. I'll run at least 11.2. The wave will be clean at slower speeds, but with big heavy boats you just need to go faster or feel emotional in another wave. 10.9 works great for other models, but for x24 (in my opinion) it is not optimal. I personally ride 11.6 or faster. Surf tab - I like a steep, tall, powerful wave. If I remember correctly (a long winter), run enough surf tab for a clean wave, which is usually 45-55% for the port side. Honestly this is the biggest variable. I only make a big difference of 5% and depending on where people are sitting that day, how much fuel, how many people on board, etc. I am changing day by day. Some days the magic number is 45%, some days it is 50%. I think each boat can be a bit different too, so it's just a pinch thing on a daily day-to-day. I have a profile as surfing today save every day I find the magic setting. I'm not quite picky about the wave either (if I can't say) so maybe it's overkill's. I'm adding 10% to the surf tab for a softer wave. This may not be a perfect soft wave, but I don't know anyone who's picky about soft wave.
